055

NEW 055 COLLECTION

UNPRECEDENTED STIFFNESS
Thanks to QUICK POWER LOCK

With the new 055, better-than-ever camera stability is guaranteed. Compared with standard leg-locking levers, our new Quick Power Lock system applies significantly increased locking power to the leg section cuffs, making the tripod much stiffer.

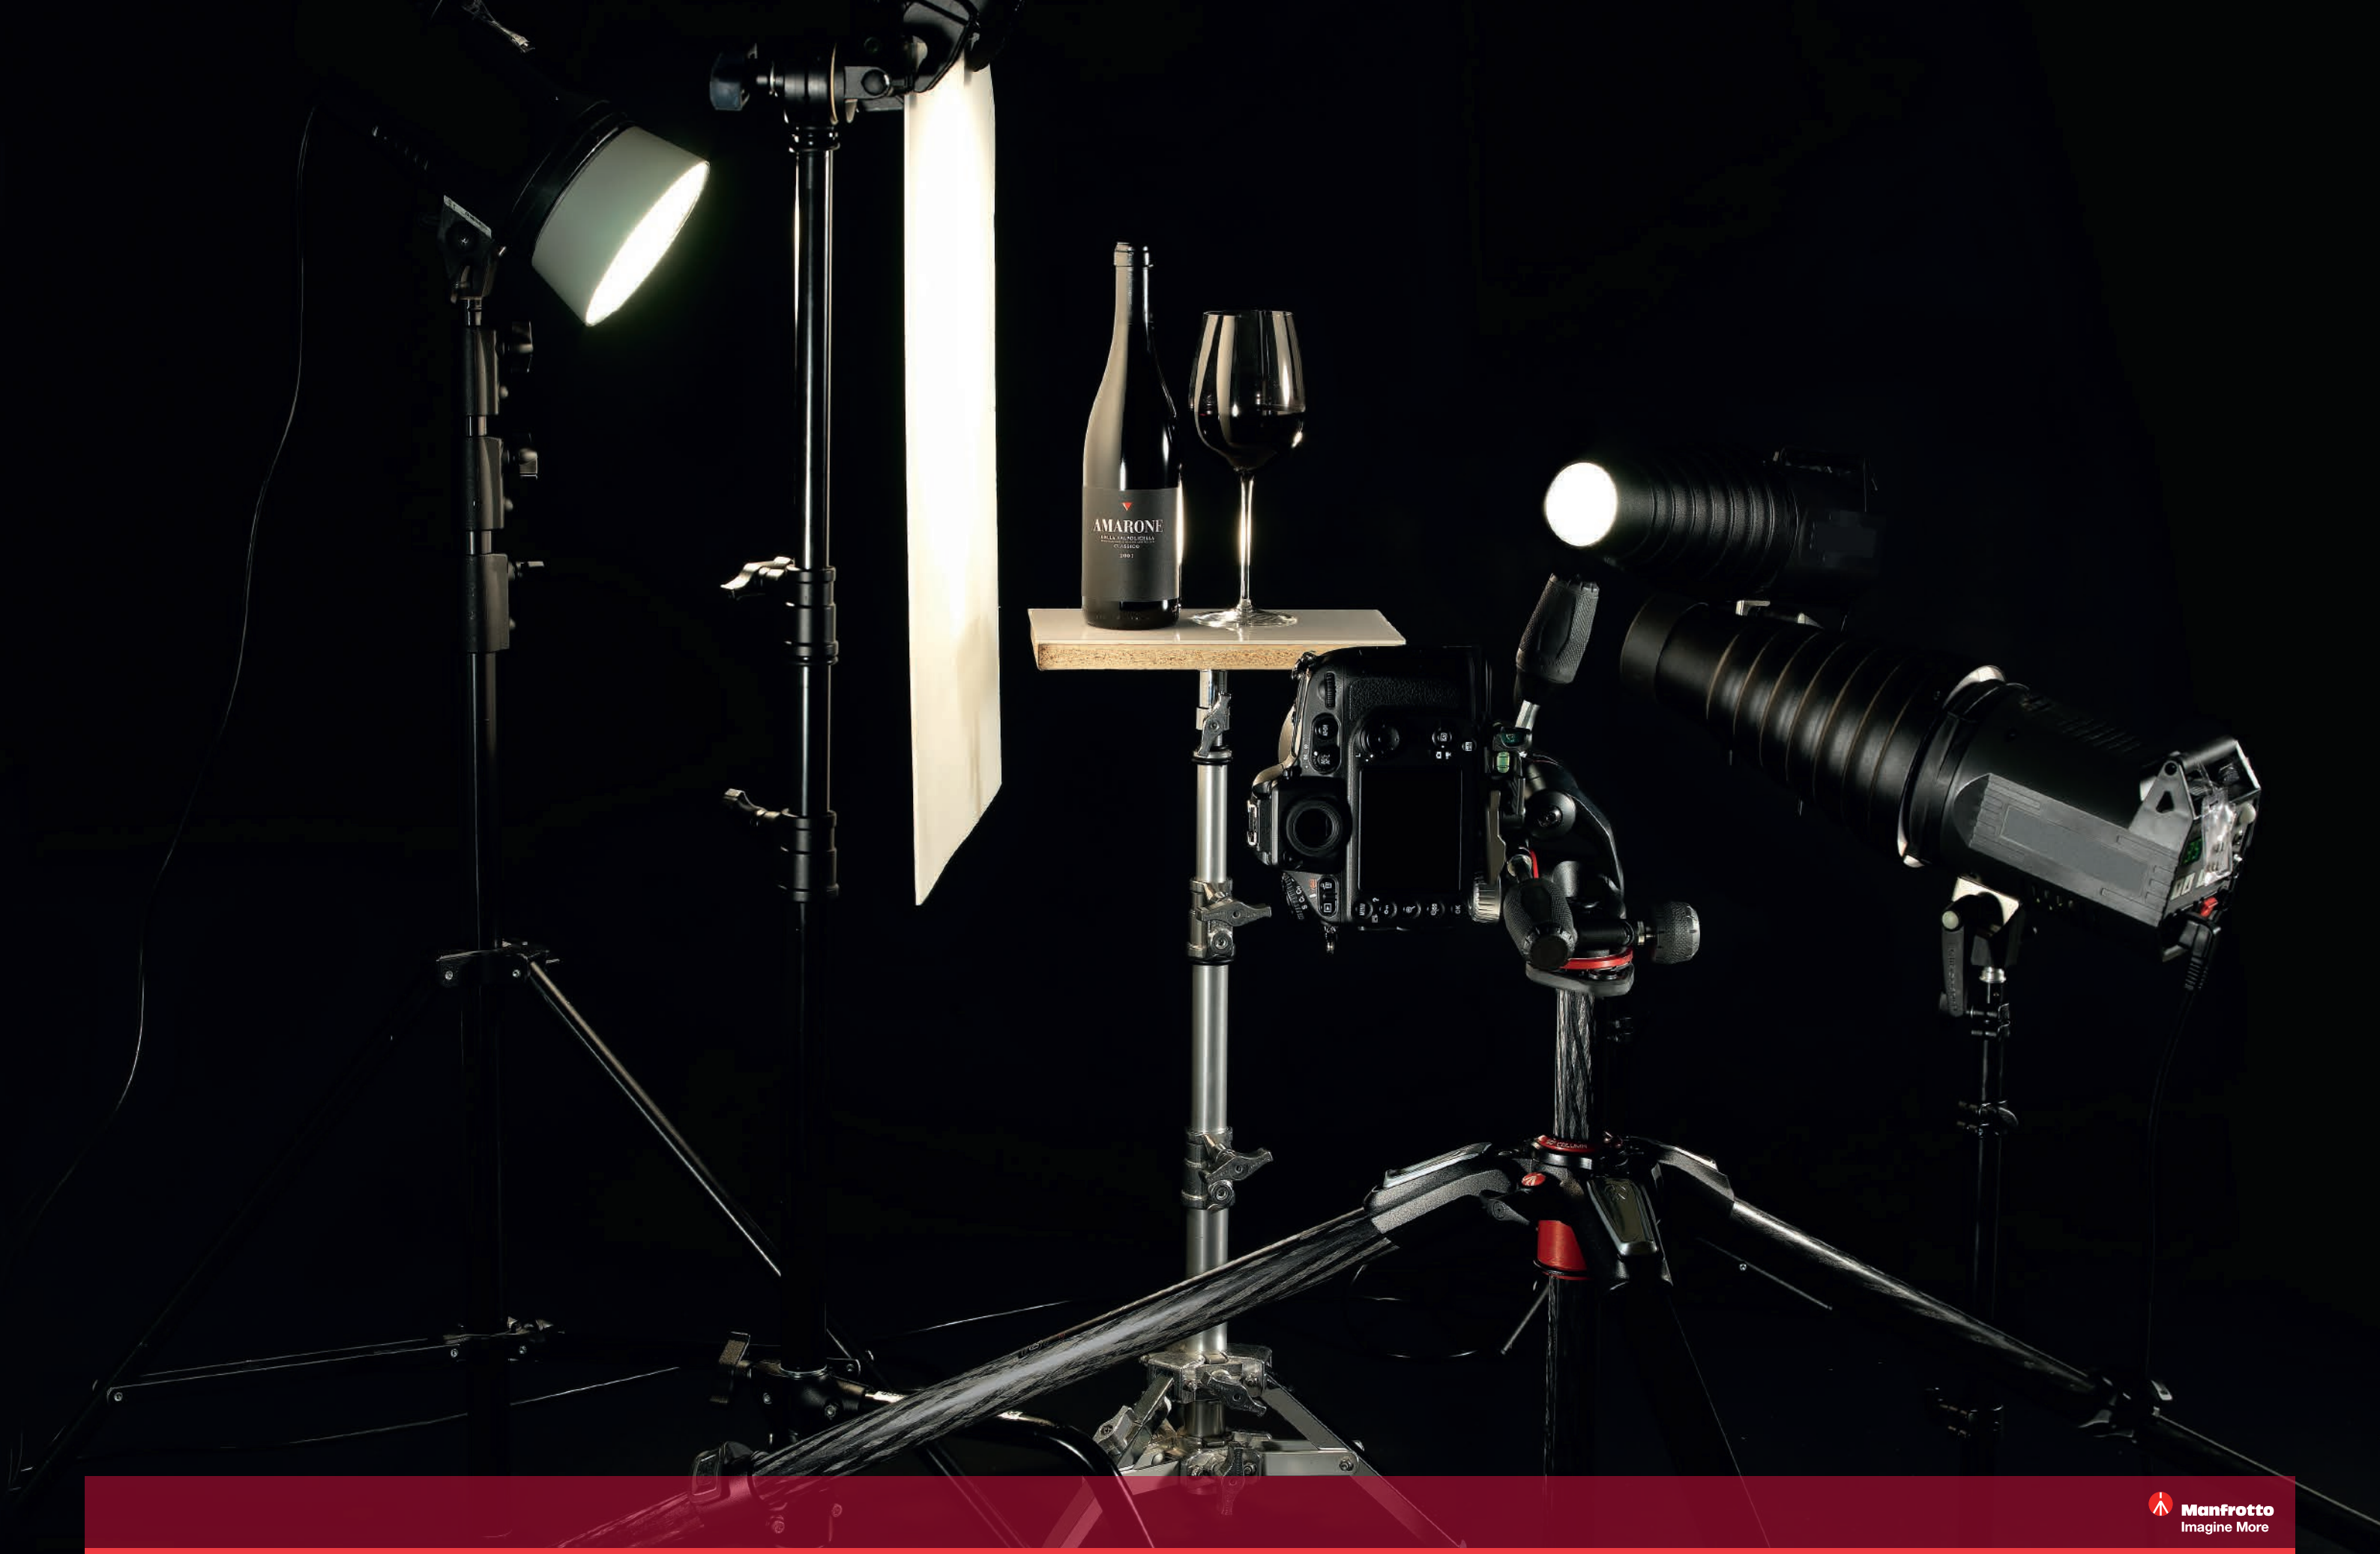

Higher locking power doesn't mean that the leg levers are harder to use, however... in fact, the QPL system has been designed to allow one-handed opening of all leg sections on a folded tripod, cutting set-up time and making operation even more ergonomic.

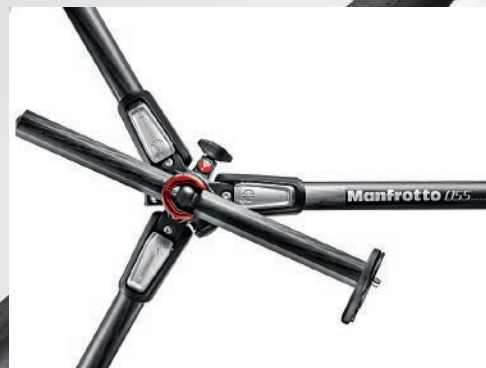

OVER- STRONG

9kg (19.8lbs)
maximum load

The new 055 supports an outstanding amount of gear.
In any position, a maximum payload of 9 kg (19.8lbs) is guaranteed.

VERSATILITY

90° Column

The new horizontal column mechanism, combined with the four leg angles, allows the new 055 to smoothly reach whatever camera position you have in mind, while always keeping your gear stable and safe.

The Easy Link attachment allows the new 055 to be used as a portable photographic studio. An arm with an LED light, a reflector, or any other accessory, can be screwed into the Easy Link fitting to take the new 055 far beyond the boundaries of other tripods' functionalities.

EASE OF USE

Rotating Bubble

The bubble level can be rotated 360° so it can always be positioned where it's most convenient for the user, never falling inconveniently under a head locking lever.

055

A detailed close-up of a Manfrotto tripod head. The central column is a dark, textured material. The head is black with silver-colored metal plates. Two leg angle selectors are visible, each with a red ring and a silver plate featuring a circular icon with a triangle. The background is a light, neutral gradient.

ERGONOMICS

Leg Angle Selectors

The leg angle selectors are intuitive and ergonomic, cut set-up time and ease the opening and closing operation.

EVERLASTING

Designed and
Made in Italy

Craftsmanship, quality and attention to detail and finish of new 055 sets it apart from the crowd. A true Made in Italy product.

055 COLLECTION - CARBON FIBRE 3-SECTION

MT055CXPRO3 CARBON FIBRE 3-SECTION TRIPOD

The new 055 3-section in its carbon fibre version delivers maximum rigidity combined with the lightest components. The outcome is a masterpiece of engineering dedicated to all those photographers who want the best from their tripod and want it to be easily transportable. The 100% carbon fibre tubes increase leg rigidity and absorb vibration, stabilizing the equipment under any conditions, and dramatically reducing the weight compared to aluminium tubes.

MT055CXPRO3

- 140cm • 55.12in
- 9cm • 3.54in
- 61cm • 24.02in
- 2kg • 4.4lb
- 9kg • 19.8lb

055 COLLECTION - CARBON FIBRE 4-SECTION

MT055CXPRO4 CARBON FIBRE 4-SECTION TRIPOD

The 055 carbon fibre tripod also comes in a 4-section version that's more compact when folded for even easier transportation. Despite the smaller size of the MT055CXPRO4, the carbon fibre legs ensure there's no compromise in terms of rigidity or vibration absorption.

055 COLLECTION - ALUMINIUM 3-SECTION

MT055XPRO3 ALUMINIUM 3-SECTION TRIPOD

The new aluminium 055 redefines the state of art of traditional 3-section metal tripods. Thanks to its size and design, and to the careful choice of materials used, the new 055 delivers an unprecedented level of stiffness.

055 COLLECTION - ALUMINIUM KITS

MK055XPRO3-BH ALUMINIUM 3-SECTION KIT WITH BALL HEAD

MK055XPRO3-3W ALUMINIUM 3-SECTION KIT WITH 3 WAY HEAD

The new 055 Aluminium 3-section tripod is also available in 2 kits: one in combination with a ball head, the other with a 3-way head. The ball head kit matches the 055 with a 498RC2 quick release head, allowing the camera to be positioned freely and quickly, and to be blocked solidly in place using the handy single locking knob, so you're ready to shoot in an instant. The 3-way head kit incorporates the brand new XPRO 3 Way Head (MHXPRO-3W - with quick release camera plate). The XPRO has retractable levers which make it ultra-compact when closed, and also features new controls that allow the friction of portrait and tilt movements to be set, giving more control over framing while the locking knob is open.
